BIO

I have a Bachelor Degree in Accounting but in the last 2 years since moving to Berlin I've discovered the beauty of the software industry by attending meetups on different subjects. This inspired me to re focus my career and work on becoming a software developer.

In order to achieve my goal and understand UX principles, I've worked on test applications for a large number of companies such as EyeEm(app for photos), Memorando and GameDuell(games) Ally(local transport application for mobile), Mimi Hearing.

I've started to learn programming by attending meetups organised by OpenTechSchool and also attending online courses on e-learning platforms like Coursera, Udacity and Code Academy.

Currently I'm eager to become a front-end developer (because I like javascript) and in order to achieve this objective I'm looking for an internship or junior developer opportunity.

SKILLS

Programming Languages - JavaScript,HTML5, CSS, Java, Python
Frameworks - JQuery, Bootstrap
